

# WE'RE HIRING!

→ Front-end [Developer]

OPEN POSITIONS:

- Business [Developer]
- Test [Engineer]
- Power Electronics [Engineer]

WE ARE LOOKING FOR:

## Front-end Developer to join our team!

We are looking for a Front-end Developer to support the development of our 360™ tool.

You will work closely with our Mission Analysis team and UX/UI Designer, using advanced technologies and methodologies to create outstanding and responsive features for our 360™ tool.

## Key responsibilities

- Create responsive, user-friendly interfaces that align with design specifications.
- Use tools to ensure application data remains consistent and properly integrated with APIs.
- Develop and execute tests, addressing any cross-browser and device compatibility challenges.
- Maintain clean, reusable code and manage version control with Git.

## Qualifications & skills

### MUST HAVE:

- 3-5 years of experience in front-end development.
- Proven experience working with the following technologies: JavaScript, TypeScript, React and Next.js.
- Experience with Material-UI or similar design libraries for building responsive, accessible user interfaces.
- Knowledge of state management libraries (e.g., Redux, Context API, Zustand).
- Experience in consuming RESTful APIs and managing asynchronous requests.
- Proficient in Git for version control and collaboration.
- Understanding of Docker and how to create and manage Docker images for deployment.
- Familiarity with AWS services, especially those relevant to application deployment and hosting (e.g., EC2, S3, RDS, Lambda).
- Knowledge of how Python works and how it runs in a virtual environment (since we install python in our frontend for use with the code editor).
- Experience with CI/CD tools for automated testing and deployment.
- Must have solid experience with responsive design principles.
- Requires prior experience working with Figma, demonstrating autonomy in consuming designs provided by the design team. This includes understanding and utilizing components, variables, and style guides effectively.
- Soft skills: problem-solving, strong verbal and written communication skills, team collaboration and attention to detail.

### NICE TO HAVE:

- Experience with AWS Copilot for application deployment not required but always a plus.
- Familiarity with testing frameworks (e.g., Jest, React Testing Library) for unit and integration testing.
- Knowledge of performance optimization techniques for React and Next.js applications.
- Accessibility (a11y): understanding of web accessibility standards and practices.
- Basic understanding of DevOps practices, especially related to CI/CD with Docker.

## Benefits & perks

- **Temporary contract** (4-6 months) until the end of the project.
- **Schedule:** we know that everyone works at their own pace, so you are free to organise your day in the way that works best for you. Whether it's making the most of your mornings or having more time in the afternoons, this flexibility will help you better balance your work and personal life.
- **Work from home:** we value contact with each other and sharing experiences, learning and knowledge. But we also know that the key to a successful team is flexibility and balance. That's why we have a hybrid working model that allows you to work from home up to 9 days a month.
- **Holidays:** We all know that we need to rest and recharge our batteries in order to give our best every day. That's why, as addition to the 23 days of holiday, we're offering you an extra 6 days of holiday over the Christmas period (from 24 December to 2 January, both included).
- **Health insurance:** your health is important to us, which is why we offer you free private health insurance through Alan.
- A dynamic environment and a motivated team committed to a unique and fast-growing project.
- Responsibility and autonomy.
